

Leadership Contract (Junior)

Plan

This trimester, I plan to grow into leading the integrating data and modelling for the Air Pollution and Respiratory Illness Correlation study. Having responsibility for the integration of the World Air Quality Index and AIHW respiratory admissions geographic and temporal datasets while maintaining data integrity and quality is my goal. In the project's larger framework, I think myself adding to the technical complexity and interpretative clarity of our results, particularly using regression modelling and geographic visualization tools like heat maps. I will work with the team as I develop into this leadership position to help identify uncertainties, promote ethical and insightful interpretations, and match our study with public health objectives. By the end of the trimester, I intend to be able to guide future directions in the project and help communicate findings to both technical and non-technical stakeholders.

Contract

I understand that to demonstrate leadership I need to:

- Show potential to lead something of significance within the company – technical leadership, product leadership, process leadership, or other forms of leadership.
- Demonstrate awareness of the big picture and have contributions that show I am influencing this picture in a constructive and effective manner and have plans to realise this further in my senior trimester.
- Positively influence others to ensure that project/product and company goals are met.
- **Clearly and concisely** highlight, describe, and provide evidence of my **individual leadership contributions**.
- Demonstrate technical expertise appropriate to my course (degree).
- Demonstrate that I am exceeding the expectations of a responsible team member as outlined in my Responsible Team Member Contract (engagement, supporting others, attending meetings, respectful behaviour etc).
